

ABOUT GRASSCYCLING AND LEAF MULCHING

GRASSCYCLING

Mowing the lawn and leaving clippings where they fall

SAVE TIME

Grasscycling is easy!

- Ask your contractor to grasscycle
- Use or ask your contractor to use a mulching mower
- Sharpen your mower blade every year
- Maintain the height of the grass at approximately 8 cm, except for the first and last grass cut, when 5 cm is preferable
- Minimize watering, unless you have a new lawn, and mow the lawn in dry weather

LEAF MULCHING

Mowing leaves and leaving them where they fall

A FREE and natural fertilizer

Leaf mulching is easy!

- Shred dry leaves with a lawn mower when they start to fall on the ground
- Mow the leaves frequently. If too many accumulate, your lawn could be damaged. Use a mulching mower preferably

Shredded leaves provide some of the mineral elements your soil and plants need to get through winter.
